

# Managed Cloud

## Transforming your cloud experience

### Let CBTS be your guide on your journey to the cloud

CBTS Managed Cloud Service allow your business to access all the benefits cloud has to offer, while our team of experts takes on the end-to-end management. This solution frees up your team to focus on initiatives that drive your business.

#### The right Managed Cloud solution for your business

No matter what cloud solution is best for your business, CBTS is here to help. Our Managed Cloud solution is available for multi-tenant, dedicated, private, and hybrid infrastructure models. This solution offers:

- Data center, equipment, security, staff, processes, and monitoring.
- A robust and scalable virtualization platform.
- SAN-based shared storage.
- Implementation on dedicated VLANs to ensure privacy and security.
- Elimination of CapEx.
- SLA-based services with monitoring and management of the virtual machines included.

#### CBTS is your Managed Cloud consultant

In addition to industry-leading knowledge and expertise, the CBTS Managed Cloud solution offers a high touch client service model. You can rest assured that your cloud environment is in capable hands with 24x7x365 support from day one including:

- Fast deployment.
- Designing, implementing, and supporting a custom cloud solution that meets your business needs.
- Expert monitoring and management.
- One monthly utility fee.

**Cloud, covered**

## Did you know CBTS also offers cloud assessments as a service?

Finding success and realizing tangible business value from a managed cloud service often requires a deep understanding of your current environment and then determining which cloud consumption models are right for your business. Cloud assessments from CBTS are designed to help map out your existing topology and create a roadmap that includes migration and ongoing management. Most often we find clients require a hybrid model to address the needs of varying workloads that reside on multi-tenant, dedicated, private, and public cloud platforms that are integrated and function as one.

## Leverage the power of CBTS Managed Cloud

- Reduce IT expenditure and establish a predictable cost structure.
- Access industry-leading skill sets to extend your existing capabilities.
- Vastly improve time to market for new applications.
- Deliver high availability for mission critical infrastructure and applications.

## Hybrid Cloud: dedicated, private and public

CBTS understands that no single compute environment will meet all of your hosting requirements. Large database or legacy applications may not be ideally suited for a multi-tenant environment and require dedicated servers. Delivering a hybrid solution which can accommodate some cloud and some dedicated infrastructure reflects CBTS and our ability to deliver a flexible and reliable platform environment that can scale to meet your changing needs.
